

Jack Kilby

<http://gardenofpraise.com/ibdkilby.htm>

Jack Kilby built a radio set	the word "micro" means very small.
His ambition was to	and became a ham operator.
During World War 2	he worked alone in the lab at TI.
He did not want to leave Milwaukee because	Texas Instruments in Dallas, Texas.
In 1958 he went to work for	Robert Noyce had come up with the same idea.
During a two-week period in 1958	Jack worked with radio transmitters in India and Burma.
In that summer of 1958 Kilby made	awarded the Nobel Prize in Physics.
In California	his family was settled there.
In the word "microchip"	the hand-held calculator.
In the 1940s the first computer	weighed over thirty tons.
While working at TI Kilby invented	become an electrical engineer.
In the year 2000 he was	a prototype for an integrated circuit.
