

Norman Borlaug

<http://gardenofpraise.com/ibdborlaug.htm>

Norman Borlaug has been called

called triticale.

When he attended the University of Minnesota

decided to pursue plant pathology.

After hearing about plant diseases he

opposed Borlaug and tried to stop his work.

The Rockefeller Foundation appointed him to

produce a much larger crop on the same ground.

In Mexico he developed a strain of wheat

India and Pakistan where people were starving.

Because of his work farmers could

he studied forestry.

Borlaug took his new wheat seed to

the father of the "Green Revolution".

He developed a new grain

which had large heads and would not fall over.

Some environmentalists have

a position to work in Mexico to improve crops.

Borlaug taught and researched

more human lives than any other person in history.

In 1970 he was awarded

the Nobel Peace Prize.

Some people credit Borlaug with saving

at Texas A and M University for 25 years.
