

## Sir Isaac Newton

<http://gardenofpraise.com/ibdnewt.htm>

When he was a boy	move unless made to do so by a force.
When he went to college he	unless some force diverts it.
He had to leave college because	kept the planets in orbit around the sun.
Watching an apple fall to the ground	Newton was interested in making mechanical devises.
He concluded that gravity	caused him to think about gravitational force.
He said an object moves in a straight line	of math we call calculus.
An object at rest does not start to	ran errands for students and ate their leftovers.
Edmund Halley urged Newton	light was broken down into different colors.
Using a prism he discovered	the reflection of the sun in a mirror.
He lost his sight by looking at	to publish the things he had learned.
Newton discovered a new kind	it closed due to the plague.
In London he dressed in disguise	to try and catch counterfeiters.
